

ABSTRACT OF THE DISCLOSURE

A universal serial bus (USB) remote host control driver includes a connection to a local network, a network protocol stack and a memory for storing network addresses of USB device adapters and USB devices on the network. A USB device adapter has one or more USB ports, a network connection, a network address, and a network protocol stack. Together, the USB remote host control driver and the USB device adapter enable interaction between a network computer and peripheral USB devices on the network.
